

## Supporting school-aged immunisations in Ealing

07 Oct 2025

### National immunisation programme

This system plays a vital role in protecting children, families, and school communities from influenza and other vaccine-preventable diseases.

In Ealing, **Vaccination UK** delivers school-aged immunisations throughout the academic year to children aged **4–16**. These include:

- Nasal flu (influenza) for all eligible children
- HPV (human papilloma virus) for secondary school pupils
- Teenage booster (Td/IPV)
- Meningitis ACWY (MenACWY)
- MMR (measles, mumps, and rubella) for those who have missed or require it

### Support required from schools

To ensure all schools are visited and all eligible children are reached, please:

- Prioritise and adhere to vaccination dates agreed with Vaccination UK
- Support communication with parents to encourage consent and maximise uptake

This will help ensure the smooth and effective delivery of the programme across the borough.
